ALLIANCE EARLY PHASE

CNS NETWORK AND HASSMAN RESEARCH INSTITUTE

Alliance Early Phase (AEP) combines thought-leader expertise in conducting complex Phase 0-2a trials across a range of patient and healthy populations. We provide single- and two-site solutions for efficient study conduct, assuring a harmonized approach to the clinical and scientific aspects of the trial.

AEP Principal Investigators have conducted 500+ early phase trials in healthy subjects and CNS, medical, and Asian bridging patient populations, including FIM, SAD, MAD, POC, DDI, BA, BE, and 505b2.

We have expertise in designing and conducting complex studies incorporating experimental medicine strategies, as well as translational drug development tools supporting neurocircuitry/biomarker based (RDoC) strategies, including continuous CSF sampling, QEEG, ERP, PSG, sMRI, fMRI, PET, and cognitive and behavioral paradigms.

Our KOLs have consulted on program design, PK/PD modeling, clinical drug development plans informed by animal behavioral markers, safety signals, protocol feasibility, and vendor selection.

LEADERSHIP

Larry Ereshefsky,
Pharm.D.

*CSO, Early Phase
Development*

CNS Network and
Hassman Research
Institute

David Walling,
Ph.D.

*CEO, Principal
Investigator*

RESEARCH SITES

[CNS Network](http://www.cnsnetwork.com) is a clinical research group operating three outpatient clinics located in the LA/Orange County area. The Long Beach facility offers a dedicated state-of-the-art [Clinical Pharmacology Unit](#) with 60 beds, and a 30-bed JCAHO-accredited inpatient Psychiatric Health Facility.

[Hassman Research Institute](http://www.hassmanresearchinstitute.com) is a clinical research site located on a large campus in Berlin, NJ. Its newly expanded [Early Phase Unit](#) can house up to 40 subjects. Separate wings provide the controlled environment needed to accommodate separate patient populations as well as translational studies.
